

## Mambo 4.5.4 integration notes

We have released a new integration kit to support MamboCharge under Mambo version 4.5.4. The new kit is available in the download area. Please view the README.txt file for installation instructions.

Those who are running MamboCharge under Mambo should be aware that the latest releases of our custom registration component `com_jw_registration_13` and login module `mod_login_jw_13` are NOT compatible with Mambo 4.5.4 as they call core functions that are not available in Mambo.

The correct versions of these components are in the Mambo Integration section of the download area. They should be used together with the Mambo 4.5.4 patch kit for site subscriptions.
