

RELEASED: MamboCharge 1.3.5

MamboCharge 1.3.5 has been released and is available in the download area. Please download the manual as well and consult the upgrade instructions prior to installing your upgrade.

Here is a cumulative list of changes since release of version 1.3.0

- Implemented a workaround for a Zend Optimizer bug that was causing the admin toolbar to disappear on certain sites where PHP is installed as a CGI and also caused a "Maximum execution time of 30 seconds exceeded" error.
 - Fixed bug in site subscription purchase handler that was causing zero-amount sales to fail with nonexistent function error.
 - Addition of MTree purchase handler. When upgrading existing sites you must manually add the mambocharge_mtlisting_purchase.php handler as a Purchase type handler for MTree as well as mambocharge_mtlisting_cancelpurchase.php as a cancel purchase handler. The latter will execute if the purchase is cancelled or a refund is issued.
 - Fixed admin bug that was adding extra blank rows to the product and category tables on systems where the RG_EMULATION option was turned off.
 - Added licensing functionality for unlimited site licenses.
 - Fixed bug that affected the reordering of products from the Admin Product management page. It only affects Mambo sites as it calls a function from the Joomla core that is not available in Mambo.
-
- Users of the SMF forum have reported a duplicate function declaration error in the showpaymentoptions page. The function has been renamed to eliminate the conflict.
